Food Grade Lubricants

Introduction

In the food and beverage manufacturing industry, the use of food safe machine lubricants can mean the difference between a good name and no name at all.

The stringent food safety standards, high productivity and problem free operations are critical for commercial success. **FUCHS LUBRITECH** offers an industry specific product range and has the technical expertise to help achieve these aims. Your business can be benefiting from **FUCHS LUBRITECH's** high performance **CASSIDA** food grade lubricants that are meeting the highest food safety standards.

From hydraulics to gearboxes, bearings to compressors, high temperature to low temperature, synthetic **CASSIDA**

and semi-synthetic or white oil based **CASSIDA FM** lubricants have been designed to help satisfy both performance and current food grade regulation criteria. **CASSIDA** and **CASSIDA FM** food grade lubricants are supported by experienced specialists who provide recommendations and solutions for the unique lubrication requirements found within food and beverage manufacturing plants.

Our global network of technical engineers and chemists develops products using the latest **FUCHS LUBRITECH** lubricants technology available, helping your plant achieving reduced downtime, extended equipment life and suitability for HACCP and Quality Assurance Food Safety plans.

Incidental Food Contact

CASSIDA and **CASSIDA FM** food grade lubricants are registered by NSF (Class H1) and meeting the USDA H1 guidelines (1998) for lubricants for use where there is a potential for incidental food contact.

CASSIDA and **CASSIDA FM** food grade lubricants are made only from substances permitted under the US FDA Title 21 CFR 178.3570, 178.3620 and/or those generally recognized as safe (GRAS, US 21 CFR 182) for use in food grade lubricants.

To comply with the requirements of US 21 CFR 178.3570, contact with food should be avoided where possible. In the case of incidental food contact, the concentration of this product in the food must not exceed 10 parts per million

(10 mg/kg of foodstuff) respectively 1 part per million (1 mg/kg of foodstuff) for silicon based products.

In locations and / or applications where local legislation does not specify maximum concentration limits, it is recommended that this same 10 ppm (1 ppm) limit be observed, as up to this concentration **CASSIDA** and **CASSIDA FM** products will not impart undesirable taste, odour or colour to food, nor will cause adverse health effects.

Consistent with good manufacturing practice, use only the amount necessary to achieve correct lubrication and take appropriate corrective action should excessive incidental contact with food be detected.

Handling and Storage

- Accept for use new **CASSIDA** and **CASSIDA FM** food grade lubricants only if the manufacturer's seal is intact.
- Before opening the packs ensure the area around the closure (or spray nozzle) is clean. It is recommended that it be cleaned with potable water or **CASSIDA FLUID FL 5** and then dried with a clean cloth before opening.
- Record the date the seal was broken.
- To prevent product contamination, always close the package after use.
- Regarding shelf life please consult the respective product information sheet for detailed figures. An overview is provided on page 7 of this document.

Product Safety and Stewardship

CASSIDA and CASSIDA FM lubricants

- **Do not contain natural** products derived from animals or **genetically modified organisms** (GMO).
- Are Suitable for use where vegetarian and 'nut-free' food is prepared.
- Do not contain any **allergenic or intolerance- inducing substances** as specified in Annex IIIa of EC Directive 2003/89/EC and Annex II of Regulation (EU) 1169/2011. This includes Molluscs and Lupins and products thereof (Commission Directive 2006/142/EC) as well as products derived from Jatropha plants.
- Comply with the actual **REACH regulation** and do not contain any substances of very high concern (SVHC).
- Do not contain any **ionic detergents**; neither cationic nor anionic.
- Are **"Biostatic"**: Do not promote the growth of bacteria or fungal organisms.
- Comply with the **Note of Guidance on minimising the risk of transmitting spongiform encephalopathy agents** (TSE) via human and veterinary medicinal products (EMEA/410/01 Rev. 3, March 2011).
- Are filled in **new packs only**. To our best knowledge our packs do not contain any substances labelled as carcinogenic, mutagenic or teratogen.
- Are formulated in accordance with the **European Di-rective 2011/65 (RoHS) and 2002/96 (WEEE)**.
- Are certified against **ISO 21469** (Safety of Machinery – Lubricants with incidental product contact – Hygiene requirements) and actual Kosher and Halal requirements.

Health and Safety

Based on information available, **CASSIDA** and **CASSIDA FM** products are unlikely to present any health or safety hazard when properly used in the recommended application and good standards of industrial and personal hygiene are maintained. As for all oils and greases, prolonged or

repeated contact with the skin should be avoided. For further information refer to the appropriate product Material Safety Data Sheet. Such recommendations are often based on experience gained in the field by machinery and lubricant manufacturers.

Product Condition during Use

It is recommended that the condition of the oil or grease and the equipment will be regularly checked to ensure safe operation.

Protect the Environment

Take used lubricants and empty packs to an authorised collection point. Do not discharge into drains, soil or water.

Official Product Shelf Life – Overview

Standard Shelf Life	Shelf Life in years from date of manufacture
CASSIDA and CASSIDA FM Fluids	5
CASSIDA and CASSIDA FM Greases	3
CASSIDA and CASSIDA FM Aerosols	3

Exceptions:	Shelf Life in years from date of manufacture
CASSIDA CHAIN OIL HTX	2
CASSIDA COOLANT	2

For detailed information, please refer to the respective product information sheet.

Discolouration during Storage

During storage, **CASSIDA** and **CASSIDA FM** products (fluids) might sometimes slightly change colour from colourless to yellowish / yellow. This discolouration is a wellknown phenomenon of certain antioxidants and is

catalysed by exposure to light and/or heat while in storage and/or transport. This colour change does not alter performance of the products in any way.

As far as we know this information reflects the current state of knowledge and our research. It cannot, however, be taken as an assurance about the properties nor as a guarantee of the suitability of the product for the individual case in point. Before using our products the purchaser must, therefore, check their suitability and be satisfied that the output will be satisfactory. Our products undergo continuous improvement. We therefore retain the right to change our product program, the products, and their manufacturing processes as well as all details of our product information sheets at any time and without prior announcement, unless otherwise provided in customer-specific agreements. With the publication of this product information sheet, all previous editions cease to be valid.

We are specialized in developing products for extreme tribological problems in cooperation with end users. FUCHS LUBRITECH provides service and individual advice.

Innovative lubricants need experienced application engineers

Every lubricant change should be preceded by expert consultation on the application in question. Only then the best lubricant system can be selected. Experienced FUCHS engineers will be glad to advise on products for the application in question and also on our full range of lubricants.
